

OTK Tuning Torsion Bars

OTK Kart Parts offers three different front torsion bars (Outside of the Standard Torsion Bar). The three available torsion bars are all 30mm diameter with the difference being the wall thickness of each bar. Starting with the thinnest (1.0mm) and progressively moving toward the thickest (2.0mm).

These torsion bars also require two additional 30mm torsion bar clamps, as the standard clamps provided with the chassis will not work.
